4차 실전모의고사

이름:

1. 다음 글의 주제로 가장 적절한 것은? ¹⁾ [13강 01번]

Up until about 6,000 years ago, most people were farmers. Many lived in different places throughout the year, hunting for food or moving their livestock to areas with enough food. There was no need to tell the time because life depended on natural cycles, such as the changing seasons or sunrise and sunset. Gradually more people started to live in larger settlements, and some needed to tell the time. For example, priests wanted to know when to carry out religious ceremonies. This was when people first invented clocks - devices that show, measure, and keep track of passing time. Clocks have been important ever since. Today, clocks are used for important things such as setting busy airport timetables - if the time is incorrect, aeroplanes might crash into each other when taking off or landing!

- ① time tables in airports
- ② the origin of the clock
- ③ time for religious worship
- ④ the beginning of agriculture
- ⑤ life styles of the ancient folks

2. 다음 글의 밑줄 친 (A), (B), (C)가 각각 가리키는 대상으로 가장 적절한 것은? ²⁾ [13강 03번]

In many sports, people realized the difficulties and even impossibilities of young children participating fully in many adult

sport environments. (A)They found the road to success for young children is unlikely if they play on adult fields, courts or arenas with equipment that is too large, too heavy or too fast for (B)them to handle while trying to compete in adult-style competition. Common sense has prevailed: different sports have made adaptations for children. As examples, baseball has T ball, football has flag football and junior soccer uses a smaller and lighter ball and (sometimes) a smaller field. All have junior competitive structures where children play for shorter time periods and often in smaller teams. In a similar way, tennis has adapted the court areas, balls and rackets to make (C)them more appropriate for children under 10. The adaptations are progressive and relate to the age of the child.

	(A)	(B)	(C)
㉠	people	young children	adaptations
㉡	people	adult fields, courts or arenas	the court areas, balls and rackets
㉢	people	young children	the court areas, balls and rackets
㉤	young children	adult fields, courts or arenas	the court areas, balls and rackets
㉥	young children	young children	adaptations

- ① ㉠ ② ㉡ ③ ㉢ ④ ㉤ ⑤ ㉥

3. 다음 글의 빈칸에 들어갈 말로 가장 적절한 것은? ³⁾ [13강 02번]

In many sports, people realized the difficulties and even impossibilities of young children participating fully in many adult sport environments. They found the road to success for young children is unlikely if they play on adult fields, courts or arenas with equipment that is too large, too heavy or too fast for them to handle while trying to compete in adult-style competition. Common sense _____ has _____ prevailed: _____. As examples, baseball has T ball, football has flag football and junior soccer uses a smaller and lighter ball and (sometimes) a smaller field. All have junior competitive structures where children play for shorter time periods and often in smaller teams. In a similar way, tennis has adapted the court areas, balls and rackets to make them more appropriate for children under 10. The adaptations are progressive and relate to the age of the child.

- ① advanced techniques and equipment have been emphasized in all sports
- ② there has been a persistent reluctance to make adjustments for children in sports
- ③ various sports have introduced modified versions suited for children's abilities
- ④ sports teams offer mentorship programs to help children overcome challenges
- ⑤ different sports have adapted only their equipment appropriate for children

4. 다음 글의 내용과 일치하는 것은? ⁴⁾ [13강 04번]

Maybe you've heard this joke: "How do you eat an elephant?" The answer is "one bite at a time." So, how do you "build" the Earth? That's simple, too: one atom at a time. Atoms are the basic building blocks of crystals, and since all rocks are made up of crystals, the more you know about atoms, the better. Crystals come in a variety of shapes that scientists call *habits*. Common crystal habits include squares, triangles, and six-sided hexagons. Usually crystals form when liquids cool, such as when you create ice cubes. Many times, crystals form in ways that do not allow for perfect shapes. If conditions are too cold, too hot, or there isn't enough source material, they can form strange, twisted shapes. But when conditions are right, we see beautiful displays. Usually, this involves a slow, steady environment where the individual atoms have plenty of time to join and fit perfectly into what's known as the *crystal lattice*. This is the basic structure of atoms that is seen time after time.

- ① 결정은 원자의 기본 구성 요소이다.
- ② 원자는 과학자들이 습성이라고 부르는 다양한 모양으로 나온다.
- ③ 액체가 차가워질 때 결정이 형성된다.
- ④ 결정이 만들어지는 조건이 맞지 않을 때 아름다운 배열을 볼 수 있다.
- ⑤ 결정격자는 결정의 기본적인 구조이다.

5. 다음 글의 주제로 가장 적절한 것은? ⁵⁾ [13강 05번]

The discovery of mirror neurons has profoundly changed the way we think of a fundamental human capacity, learning by observation. As children we learn a lot by observing what our parents and friends do. Newborns, in the first week of life, have an inborn tendency to stick out their tongue if their parents stick out theirs. Such imitation is not perfect. You may not see the tongue stick out each time you stick yours out at your newborn, but if you do it many times, the tongue will come out more often than if you do something different. Babies babble and later start to imitate the sounds their parents produce. Later still, they play with vacuum cleaners and hammers in imitation of their parents. Our modern cultures, in which we write, speak, read, build spaceships and go to school, can work only because we are not restricted to the behavior we are born with or learn by trial and error.

- ① Trial and error is an effective way to learn.
- ② Constant practice only makes learning perfect.
- ③ Any imitation cannot be perfect in some ways.
- ④ Children's learning must be supervised by the parents.
- ⑤ Behaviors and knowledge are acquired by copying others.

6. 다음 글의 주제로 가장 적절한 것은? ⁶⁾ [13강 06번]

When you pluck a guitar string it moves back and forth hundreds of times every second. Naturally, this movement is so fast that you cannot see it — you just see the blurred outline of the moving string. Strings vibrating in this way on their own make hardly any noise because strings are very thin and don't push much air about. But if you attach a string to a big hollow box (like a guitar body), then the vibration is amplified and the note is heard loud and clear. The vibration of the string is passed on to the wooden panels of the guitar body, which vibrate back and forth at the same rate as the string. The vibration of the wood creates more powerful waves in the air pressure, which move away from the guitar. When the waves reach your eardrums they flex in and out the same number of times a second as the original string.

- ① how sound travels through the air
- ② why guitar strings vibrate at high speed
- ③ why materials of guitar strings are important
- ④ how to control string movement to produce sound
- ⑤ how the guitar body amplifies the sound of the strings

7. 다음 글의 주제로 가장 적절한 것은? ㉠ [13강 07번]

The adolescent brain is not fully developed until its early twenties. This means the way the adolescents' decision-making circuits integrate and process information may put them at a disadvantage. One of their brain regions that matures later is the prefrontal cortex, which is the control center, tasked with thinking ahead and evaluating consequences. It is the area of the brain responsible for preventing you from sending off an initial angry text and modifying it with kinder words. Due to these differences, there is an imbalance between feeling-based decision-making ruled by the more mature limbic system and logical-based decision-making by the not-yet-mature prefrontal cortex. This may explain why some teens are more likely to make bad decisions. On the other hand, the limbic system matures earlier, playing a central role in processing emotional responses. Because of its earlier development, it is more likely to influence decision-making. Decision-making in the adolescent brain is led by emotional factors more than the perception of consequences.

- ㉠ the reason for adolescents' emotion-driven decision-making
- ㉡ the function of the prefrontal cortex in controlling anger
- ㉢ the genetic influence on adolescent brain development
- ㉣ the role of parental guidance in promoting better teen decisions
- ㉤ the importance of peer relationships in adolescent social growth

8. 다음 글의 주제로 가장 적절한 것은? ㉠ [13강 08번]

Problems often arise if an exotic species is suddenly introduced to an ecosystem. Britain's red and grey squirrels provide a clear example. When the grey arrived from America in the 1870s, both squirrel species competed for the same food and habitat, which put the native red squirrel populations under pressure. The grey had the edge because it can adapt its diet; it is able, for instance, to eat green acorns, while the red can only digest mature acorns. Within the same area of forest, grey squirrels can destroy the food supply before red squirrels even have a bite. Greys can also live more densely and in varied habitats, so have survived more easily when woodland has been destroyed. As a result, the red squirrel has come close to extinction in England.

- ㉠ the role of food in driving species to extinction
- ㉡ how native wildlife benefits from exotic species
- ㉢ the impact of non-native animals on ecosystem balance
- ㉣ the planned effort to replace native wildlife with foreign species
- ㉤ the disadvantages of having native species dominate the ecosystem

9. 다음 글의 빈칸에 들어갈 말로 가장 적절한 것은?⁹⁾ [13강 09번]

Understanding how to develop respect for and a knowledge of other cultures begins with reexamining the golden rule: 'I treat others in the way I want to be treated. This rule makes sense on some level: if we treat others as well as we want to be treated, we will be treated well in return. This rule works well in a monocultural setting, where everyone is working within the same cultural framework. In a multicultural setting, however, where words, gestures, beliefs, and views may have different meanings, this rule has an unintended result; it can send a message that my culture is better than yours. It can also create a frustrating situation where we believe we are doing what is right, but what we are doing is not being interpreted in the way in which it was meant. This _____ can lead to problems.

- ① reliability ② prevention
- ③ disapproval ④ improvement
- ⑤ miscommunication

10. 다음 글의 제목으로 가장 적절한 것은?¹⁰⁾ [13강 10번]

According to legend, once a vampire bites a person, that person turns into a vampire who seeks the blood of others. A researcher came up with some simple math, which proves that these highly popular creatures can't exist. University of Central Florida physics professor Costas Efthimiou's work breaks down the myth. Suppose that on January 1st, 1600, the human population was just over five hundred million. If the first vampire came into existence that day and bit one person a month, there would have been two vampires by February 1st, 1600. A month later there would have been four, the next month eight, then sixteen, and so on. In just two-and-a-half years, the original human population would all have become vampires with no humans left. But look around you. Have vampires taken over the world? No, because there's no such thing.

- ① Brief Overview of Vampire History
- ② Exponential Population Growth of Vampires
- ③ Verification of Absurdity of a Vampire Myth
- ④ Struggle for Habitat between Vampires and Humans
- ⑤ Vampire and Dracula: Mythical Figures That Suck Blood

❖ 다음 글을 읽고 물음에 답하십시오. [13강 12번]

(A) Most times a foreign language is spoken in film, subtitles are used to translate the dialogue for the viewer. However, there are occasions when foreign dialogue is left unsubtitled (and thus incomprehensible to most of the target audience). This is often done if the movie is seen mainly from the viewpoint of a particular character who does not speak the language. Such @absence of subtitles allows the audience to feel a similar sense of incomprehension and alienation that the character feels. An example of this is seen in Not Without My Daughter. The Persian language dialogue spoken by the Iranian characters is ⑥ unsubtitled because the main character Betty Mahmoody does not speak Persian and the audience is seeing the film from her viewpoint.

*subtitle: 자막(을 넣다)

**incomprehensible: 이해할 수 없는

***alienation: 소외

(B) Robert Schumann once said, “The laws of morals are those of art.” What the great man is saying here is that there is good music and bad music. The greatest music, even if it’s tragic in nature, takes us to a world higher than ours; somehow the beauty @uplifts us. Bad music, on the other hand, degrades us. It’s the same with performances: a bad performance isn’t necessarily the result of incompetence. Some of the worst performances occur when the performers, no matter how accomplished, are thinking @less of themselves than of the music they’re playing. These doubtful characters aren’t

really listening to what the composer is saying - they’re just showing off, hoping that they’ll have a great ‘success’ with the public. The performer’s basic task is to try to @understand the meaning of the music, and then to communicate it honestly to others.

*incompetence: 무능 **degrade: 격하시키다

11. 위 글 (A), (B)의 밑줄 친 부분 중, 문맥상 낱말의 쓰임이 적절하지 않은 것은? 11)

- ① a ② b ③ c ④ d
 ⑤ e

12. 위 글 (A), (B)를 읽은 학생들의 반응이다. 필자의 의도와 부합하는 발언을 한 학생들만으로 올바르게 짝지어진 것은? 12)

지혜: After reading text (A), I realized that there are the cases in which subtitles are deliberately omitted.

석화: Text (B) reminded me of the classical performance that I saw last Christmas Eve. It felt like a nightmare. I think all poor performances are caused by the performers’ being unskilled in playing their instruments.

은화: According to text (A) and (B), when interpreting music and movies, it is not that important to consider intentions which the creators want to reveal.

- ① 지혜 ② 석화 ③ 은화
 ④ 지혜, 석화 ⑤ 지혜, 은화

13. 다음 빈칸에 들어갈 말로 가장 적절한 것은? ¹³⁾ [13강 11번]

Managers are always looking for ways to increase productivity, which is the ratio of costs to output in production. Adam Smith, writing when the manufacturing industry was new, described a way that production could be made more efficient, known as “_____.” Making most manufactured goods involves several different processes using different skills. Smith’s example was the manufacture of pins: the wire is straightened, sharpened, a head is put on, and then it is polished. One worker could do all these tasks, and make 20 pins in a day. But this work can be divided into its separate processes, with a number of workers each performing one task. Because each worker specializes in one job, he or she can work much faster without changing from one task to another. Now 10 workers can produce thousands of pins in a day - a huge increase in productivity from the 200 they would have produced before.

*ratio: 비율

- ① the division of labor
- ② safe working conditions
- ③ empowerment of workers
- ④ an analysis of labor market
- ⑤ the calculation of productivity

14. 다음 글의 주제로 가장 적절한 것은? ¹⁴⁾ [12강 05번]

Developing a personal engagement with poetry brings a number of benefits to you as an individual, in both a personal and a professional capacity. Writing poetry has been shown to have physical and mental benefits, with expressive writing found to improve immune system and lung function, diminish psychological distress, and enhance relationships. Poetry has long been used to aid different mental health needs, develop empathy, and reconsider our relationship with both natural and built environments. Poetry is also an incredibly effective way of actively targeting the cognitive development period, improving your productivity and scientific creativity in the process. In short, poetry has a lot to offer, if you give it the opportunity to do so.

*cognitive: 인지적인

- ① poetry that heals the whole thing in human
- ② misunderstanding that poetry cures people’s disease
- ③ use of poetry as developing environmental conflict by poetry
- ④ approaches to resolve environmental conflict by poetry
- ⑤ critical period of children to enhance creativity

15. 다음 글의 흐름으로 보아, 주어진 문장이 들어가기에 가장 적절한 곳은? ¹⁵⁾ [13강 13번]

Some trees have plenty of sugar and some have less, but the trees equalize this difference between them by transferring sugar.

Each beech tree grows in a particular location and soil conditions can vary greatly in just a few yards. The soil can have a great deal of water or almost no water. It can be full of nutrients or not. (A) Accordingly, each tree grows more quickly or more slowly and produces more or less sugar, and thus you would expect every tree to be photosynthesizing at a different rate. (B) However, the rate is the same. (C) Whether they are thick or thin, all the trees of the same species are using light to produce the same amount of sugar per leaf. (D) This is taking place underground through the roots. (E) Whoever has an abundance of sugar hands some over; whoever is running short gets help. Their network acts as a system to make sure that no trees fall too far behind.

*photosynthesize 광합성하다

- ① A ② B ③ C ④ D ⑤ E

With no horses available, the Inca empire excelled at delivering messages on foot. The messengers were stationed on the royal roads to deliver the Inca king's orders and reports coming from his lands. Called Chasquis, they lived in groups of four to six in huts, placed from one to two miles apart along the roads. They were all young men and especially good runners who watched the road in both directions. If they caught sight of another messenger coming, they hurried out to meet them. The Inca built the huts on high ground, in sight of one another. When a messenger neared the next hut, he began to call out and repeated the message three or four times to the one who was running out to meet him. The Inca empire could relay messages 1,000 miles (1,610 km) in three or four days under good conditions.

*excel: 탁월하다 **messenger: 전령

16. 밑글의 제목으로 가장 적절한 것은? ¹⁶⁾

- ② The Origin of Contemporary Mailing System
- ③ The Only Way for Commoners to Become Nobles in the Inca Empire
- ④ The Inca's Horseback Riding Service: Revolutionizing Communication
- ⑤ Inca Empire's Foot Messengers: The Chasquis Relay System

17. 다음 글의 제목으로 가장 적절한 것은? 17)
[13강 15번]

As businesses shift some core business activities to digital, such as sales, marketing, or archiving, it is assumed that the impact on the environment will be less negative. However, digital business activities can still threaten the environment. In some cases, the harm of digital businesses can be even more hazardous. A few decades ago, offices used to have much more paper waste since all documents were paper based. When workplaces shifted from paper to digital documents, invoices, and emails, it was a promising step to save trees. However, the cost of the Internet and electricity for the environment is neglected. A recent Wired report declared that most data centers' energy source is fossil fuels. When we store bigger data on clouds, increased carbon emissions make our green clouds gray. The carbon footprint of an email is smaller than mail sent via a post office, but still, it causes four grams of CO₂, and it can be as much as 50 grams if the attachment is big.

- ① Digital Documents Should Be Preferred to Paper Based Ones
- ② What Makes Digital Businesses Attractive to Workplaces?
- ③ Don't Let the Carbon Footprint Fool You!
- ④ The Impact of Digital Businesses on the Environment: Worse than Imagined
- ⑤ Business Activities: Not Simply a Matter of Fossil Fuels

 고르시오. 18) [13강 16번]

To rise, a fish must reduce its overall density, and most fish do this with a swim bladder. A fish fills its bladder with oxygen @collecting from the surrounding water. As it is filled, the bladder expands. Then, the fish has a greater

volume, but its weight is not greatly increasing. This means what its density has been decreasing, so the fish experiences a greater rising force. Finally, when the bladder is fully expanded, the fish is at its maximum volume and is pushed to the surface. Most fish rise using this method, but not all do. Some species don't need a swim bladder because they spend all their lives moving along the ocean floor. Another fish float and sink by propelling themselves forward.

- ① a, c ② b, d
- ③ c, d ④ a, c, e
- ⑤ b, d, e

19. 다음 글에서 필자가 주장하는 바로 가장 적절한 것은? 19) [11강 42번]

Generalization without specific examples that humanize writing is boring to the listener and to the reader. Who wants to read platitudes all day? Who wants to hear the words great, greater, best, smartest, finest, humanitarian, on and on and on without specific examples? Instead of using these 'nothing words,' leave them out completely and just describe the particulars. There is nothing worse than reading a scene in a novel in which a main character is described up front as heroic or brave or tragic or funny, while thereafter, the writer quickly moves on to something else. That's no good, no good at all. You have to use less one word descriptions and more detailed, engaging descriptions if you want to make something real.

- ① 등장인물을 묘사하는 강력한 한 단어는 계속 필요하다.
- ② 독자의 흥미를 끌기 위해서는 상투적인 표현도 필요하다.
- ③ 구체적인 예시와 함께 세부적인 것을 묘사하는 것이 필요하다.
- ④ 비슷한 표현을 쓰기 위해서는 점진적인 사고의 발전의 필요하다.
- ⑤ 독자가 공감할 수 있도록 매력적인 주인공을 만드는 것이 필요하다.

20. 주어진 글 다음에 이어질 글의 순서로 가장 적절한 것은? ²⁰⁾ [11강 60번]

The best defence most species of octopus have is to stay hidden as much as possible and do their own hunting at night.

(A) So to find one in full view in the shallows in daylight was a surprise for two Australian underwater photographers. Actually, what they saw at first was a flounder. It was only when they looked again that they saw a medium-sized octopus, with all eight of its arms folded and its two eyes staring upwards to create the illusion.

(B) After the initial identification of the mimic octopus, numerous additional examples of this species have been documented and there are now photographs of octopuses that could be said to be transforming into sea snakes. And while they mimic, they hunt—producing the spectacle of, say, a flounder suddenly developing an octopodian arm, sticking it down a hole and grabbing whatever's hiding there.

(C) Their discovery was a mimic octopus living near shallow sandy bottoms or coral reefs in the Indo-Pacific region. An octopus has a big brain, excellent eyesight and the ability to change colour and pattern, and this one was using these assets to turn itself into a completely different creature.

- ① (A) - (B) - (C) ② (A) - (C) - (B)
 ③ (B) - (C) - (A) ④ (C) - (A) - (B)
 ⑤ (C) - (B) - (A)

21. 다음 글의 주제로 가장 적절한 것은? ²¹⁾ [12강 01번]

A group of psychologists studied individuals with severe mental illness who experienced weekly group music therapy, including singing familiar songs and composing original songs. The results showed that the group music therapy improved the quality of participants' life, with those participating in a greater number of sessions experiencing the greatest benefits. Focusing on singing, another group of psychologists reviewed articles on the efficacy of group singing as a mental health treatment for individuals living with a mental health condition in a community setting. The findings showed that, when people with mental health conditions participated in a choir, their mental health and wellbeing significantly improved. Group singing provided enjoyment, improved emotional states, developed a sense of belonging and enhanced self-confidence.

*therapy: 치료 **efficacy: 효능

- ① how music changes human emotions
 ② the role of choirs in modern society
 ③ various methods of treating mental illness
 ④ the positive effects of group music therapy
 ⑤ building self-confidence through social activities

22. 다음 글의 빈칸에 들어갈 말로 가장 적절한 것은? ²²⁾ [12강 06번]

In statistics, the law of large numbers describes a situation where having more data is better for making predictions. According to it, the more often an experiment is conducted, the closer the average of the results can be expected to match the true state of the world. For instance, on your first encounter with the game of roulette, you may have beginner's luck after betting on 7. But the more often you repeat this bet, the closer the relative frequency of wins and losses is expected to approach the true chance of winning, meaning _____ that _____.

Similarly, car insurers collect large amounts of data to figure out the chances that drivers will cause accidents, depending on their age, region, or car brand. Both casinos and insurance industries rely on the law of large numbers to balance individual losses.

- ① luck will eventually determine whether you win or not
- ② the outcome of every trial will depend entirely on fortune
- ③ mathematical probability will be replaced by chance in the end
- ④ your result will mirror statistical reality rather than mere luck
- ⑤ the influence of luck will remain constant no matter how often you play

23. 다음 글의 내용을 한 문장으로 요약하고자 한다. 빈칸 (A), (B)에 들어갈 말로 가장 적절한 것은? ²³⁾ [12강 07번]

In a single week, the sun delivers more energy to our planet than humanity has used through the burning of coal, oil, and natural gas through all of human history. And the sun will keep shining on our planet for billions of years. Our challenge isn't that we're running out of energy. It's that we have been focused on the wrong source – the small, finite one that we're using up. Indeed, all the coal, natural gas, and oil we use today is just solar energy from millions of years ago, a very tiny part of which was preserved deep underground. Our challenge, and our opportunity, is to learn to efficiently and cheaply use the much more abundant source that is the new energy striking our planet each day from the sun.

We tend to (A)_____ the possibility of infinite energy coming from the sun and be concerned about the (B)_____ of some energy, such as fossil fuels.

- | (A) | (B) |
|-------------|---------------|
| ① overlook | lack |
| ② recognize | scarcity |
| ③ ignore | richness |
| ④ perceive | ampleness |
| ⑤ neglect | plentifulness |

24. 다음 글의 내용을 한 문장으로 요약하고자 한다. 빈칸 (A), (B)에 들어갈 말로 가장 적절한 것은? ²⁴⁾ [12강 11번]

Although technology has the potential to increase productivity, it can also have a negative impact on productivity. For example, in many office environments workers sit at desks with computers and have access to the internet. They are able to check their personal e-mails and use social media whenever they want to. This can stop them from doing their work and make them less productive. Introducing new technology can also have a negative impact on production when it causes a change to the production process or requires workers to learn a new system. Learning to use new technology can be time consuming and stressful for workers and this can cause a decline in productivity.

The negative impact of technology on productivity is illustrated through two aspects : employees' access to personal (A)_____ like email and social media and a change of existing processes or (B)_____ of additional worker training.

- | (A) | (B) |
|-----------------|---------------|
| ① preference | benefit |
| ② vulnerability | value |
| ③ conflict | impact |
| ④ distraction | necessity |
| ⑤ channels | effectiveness |

25. 다음 글의 제목으로 가장 적절한 것은? ²⁵⁾
 [12강 16번]

Many of us live our lives without examining why we habitually do what we do and think what we think. Why do we spend so much of each day working? Why do we save up our money? If pressed to answer such questions, we may respond by saying "because that's what people like us do." But there is nothing natural, necessary, or inevitable about any of these things: instead, we behave like this because the culture we belong to compels us to. The culture that we inhabit shapes how we think, feel, and act in the most pervasive ways. It is not in spite of our culture that we are who we are, but precisely because of it.

- ① Factors of inhabitable areas
- ② Influence of the culture on us
- ③ Need to improve our daily lives
- ④ Reflection on what we think
- ⑤ Manners to observe as social members

26. 다음 빈칸에 들어갈 말로 가장 적절한 것은? ²⁶⁾ [12강 22번]

Humans for centuries have dreamed of machines that could become intelligent and make human-like decisions. There have been myths about robots, automatons, and artificial beings since ancient Greece (e.g., the myth of Pandora, who released ills upon the world). Likewise, literature throughout history has dreamed of creating human-like creatures and thinking machines (e.g., Mary Shelley's *Frankenstein*). In 1950, British mathematician Alan Turing asked whether machines could think and reason like humans and then developed the Turing test to measure a machine's intelligence and whether the machines can think autonomously. A few years later, MIT professor John McCarthy coined "artificial intelligence," replacing the previously used expression "automata studies." Since then, artificial intelligence has become the study and practice of "making intelligent machines" that _____.

*automaton: 자동 장치 **endow: 부여하다

- ① try to imitate humans' behavior systematically
- ② are regarded as innovative creatures different from humans
- ③ build up the huge database by copying personal information
- ④ are designed to reason and learn the same way as humans
- ⑤ are replaced by another human-like creature without errors
