7차 실전모의고사

이름:

1. 다음 글의 밑줄 친 ㉠~㉥ 중 어법상 바르게 쓰인 것의 개수는? ¹⁾ [13강 04번]

Maybe you've heard this joke: "How do you eat an elephant?" The answer is "one bite at a time." So, how do you "build" the Earth? That's simple, too: one atom at a time. Atoms are the basic building blocks of crystals, and ㉠because of the fact that all rocks are made up of crystals, the more you know about atoms, the better. Crystals come in a variety of shapes ㉢which scientists call *habits*. Common crystal habits include squares, triangles, and six-sided hexagons. Usually crystals form when liquids cool, such as when you create ice cubes. Many times, crystals form in ways ㉣in which do not allow for perfect shapes. If conditions are too cold, too hot, or there ㉡aren't enough source material, they can form strange, twisted shapes. But when conditions are right, we see beautiful displays. Usually, this involves a slow, steady environment where the individual atoms have plenty of time to join and fit perfectly into ㉤which is known as the *crystal lattice*. This is the basic structure of atoms that is seen time after time.

- ① 1개 ② 2개 ③ 3개 ④ 4개 ⑤ 5개

2. 다음 글의 주제와 가장 잘 어울리는 표현은? ²⁾ [13강 05번]

The discovery of mirror neurons has profoundly changed the way we think of a fundamental human capacity, learning by observation. As children we learn a lot by observing what our parents and friends do. Newborns, in the first week of life, have an inborn tendency to stick out their tongue if their parents stick out theirs. Such imitation is not perfect. You may not see the tongue stick out each time you stick yours out at your newborn, but if you do it many times, the tongue will come out more often than if you do something different. Babies babble and later start to imitate the sounds their parents produce. Later still, they play with vacuum cleaners and hammers in imitation of their parents. Our modern cultures, in which we write, speak, read, build spaceships and go to school, can work only because we can learn a lot by simply watching others.

- ① No man was ever great by imitation. - Samuel Johnson
② Experience is a good school. But the fees are high. - Heinrich Heine
③ To copy others is necessary, but to copy oneself is pitiful. - Pablo Picasso
④ If you have never been hated by your child, you have never been a parent. - Bette Davis
⑤ Don't worry that children never listen to you; worry that they are always watching you.

3. 다음 글의 내용과 일치하지 않는 것은? ³⁾ [13강 07번]

The adolescent brain is not fully developed until its early twenties. This means the way the adolescents' decision-making circuits integrate and process information may put them at a disadvantage. One of their brain regions that matures later is the prefrontal cortex, which is the control center, tasked with thinking ahead and evaluating consequences. It is the area of the brain responsible for preventing you from sending off an initial angry text and modifying it with kinder words. On the other hand, the limbic system matures earlier, playing a central role in processing emotional responses. Because of its earlier development, it is more likely to influence decision-making. Decision-making in the adolescent brain is led by emotional factors more than the perception of consequences. Due to these differences, there is an imbalance between feeling-based decision-making ruled by the more mature limbic system and logical-based decision-making by the not-yet-mature prefrontal cortex. This may explain why some teens are more likely to make bad decisions.

- ① The human brain does not fully mature until the early twenties, which can affect adolescent decision-making.
- ② The prefrontal cortex, maturing later than the limbic system, helps think ahead and weigh consequences.
- ③ The limbic system matures earlier and plays a key role in emotional processing.
- ④ Awareness of outcomes tends to influence teenage decision-making more than emotional factors do.
- ⑤ A developmental gap between emotional and logical brain functions can lead adolescents to make unwise decisions.

4. 다음 글의 흐름으로 보아 주어진 문장이 들어 가기에 가장 적절한 곳은? ⁴⁾ [13강 09번]

This rule makes sense on some level; if we treat others as well as we want to be treated, we will be treated well in return.

Understanding how to develop respect for and a knowledge of other cultures begins with reexamining the golden rule: "I treat others in the way I want to be treated." (A) This rule works well in a monocultural setting, where everyone is working within the same cultural framework. (B) In a multicultural setting, however, where words, gestures, beliefs, and views may have different meanings, this rule has an unintended result; it can send a message that my culture is better than yours. (C) It can also create a frustrating situation where we believe we are doing what is right, but what we are doing is not being interpreted in the way in which it was meant. (D) This miscommunication can lead to problems. (E)

- ① A ② B ③ C ④ D ⑤ E

5. 다음 글의 내용을 한 문장으로 요약하고자 할 때, 빈칸 (A), (B)에 들어갈 말로 가장 적절한 것은? ⁵⁾ [13강 11번]

Managers are always looking for ways to increase productivity, which is the ratio of costs to output in production. Adam Smith, writing when the manufacturing industry was new, described a way that production could be made more efficient, known as the "division of labor." Making most manufactured goods involves several different processes using different skills. Smith's example was the manufacture of pins: the wire is straightened, sharpened, a head is put on, and then it is polished. One worker could do all these tasks, and make 20 pins in a day. But this work can be divided into its separate processes, with a number of workers each performing one task. Because each worker specializes in one job, he or she can work much faster without changing from one task to another. Now 10 workers can produce thousands of pins in a day - a huge increase in productivity from 200 they would have produced before.

The notion, "division of labor", where workers (A)_____ in separate tasks, significantly (B)_____ productivity and efficiency compared to one person performing every production step.

- | (A) | (B) |
|---------------|------------|
| ① hand | improves |
| ② differ | undermines |
| ③ engage | maintains |
| ④ specialize | boosts |
| ⑤ participate | hinders |

6. 다음 글의 제목으로 가장 적절한 것은? ⁶⁾ [13강 15번]

As businesses shift some core business activities to digital, such as sales, marketing, or archiving, it is assumed that the impact on the environment will be less negative. However, digital business activities can still threaten the environment. In some cases, the harm of digital businesses can be even more hazardous. A few decades ago, offices used to have much more paper waste since all documents were paper based. When workplaces shifted from paper to digital documents, invoices, and emails, it was a promising step to save trees. However, the cost of the Internet and electricity for the environment is neglected. A recent Wired report declared that most data centers' energy source is fossil fuels. When we store bigger data on clouds, increased carbon emissions make our green clouds gray. The carbon footprint of an email is smaller than mail sent via a post office, but still, it causes four grams of CO₂, and it can be as much as 50 grams if the attachment is big.

- ① The Paperless Office: A Green Revolution
- ② Digital Revolution: Transforming Business Strategies
- ③ Redefining Environmental Responsibility in the Digital Age
- ④ The Digital Advantage: Dealing with Environmental Concerns
- ⑤ Digital Shift: Hidden Environmental Costs of Going Paperless

7. 다음 글의 제목으로 가장 적절한 것은? 7) [13강 25번]

As individuals, our ability to thrive depended on how well we navigated relationships in a group. If the group valued us, we could count on support, resources, and probably a mate. If it didn't, we might get none of these merits. It was a matter of survival, physically and genetically. Over millions of years, the pressure selected for people who are sensitive to and skilled at maximizing their standing. The result was the development of a tendency to unconsciously monitor how other people in our community perceive us. We process that information in the form of self-esteem and such related emotions as pride, shame, or insecurity. These emotions compel us to do more of what makes our community value us and less of what doesn't. And, crucially, they are meant to make that motivation feel like it is coming from within. If we realized, on a conscious level, that we were responding to social pressure, our performance might come off as grudging or cynical, making it less persuasive.

- ① Self-Esteem as a Built-In Tool for Social Survival
- ② How Early Humans Competed for Food and Territory
- ③ 3 The Role of Resources and Mates in Early Human Life
- ④ 4 The Role of Physical Strength in Winning Group Support
- ⑤ Why Some People Were Naturally More Confident than Others

8. 다음 글의 빈칸에 들어갈 말로 가장 적절한 것은? 8) [13강 29번]

History, people often say, repeats itself. And looking at the historical records of the ancient civilizations, some things do seem to happen again and again. Civilizations expand, get overextended, and then collapse as in the cases of Rome, which went under in 476 AD, and the British Empire, which fell apart more than a thousand years later in the post-World War II era. But is this always the case? If so, archaeology would be pretty boring; one thing would happen again and again. But that's not what archaeologists see. Some civilizations end suddenly, like the Aztec and Inca, conquered by invaders in the 1520s AD. Those empires never had the chance to collapse as a result of overexpansion. So in the case of civilizations, "history repeats itself" seems to be an oversimplification. The statement has another problem: What about prehistory? What does it say about the millions of years of human or at least proto-human life that preceded historical records? As an archaeologist, I can tell you that prehistory, lacking written records, tells us very little about that vast period. Taking everything discussed so far into account, archaeology suggests that although the idea that history repeats itself may be true in some cases,

_____.

*proto-human: 원시 인류

- ① it remains the most reliable principle for understanding all human societies
- ② it is just too simplistic and limited to account for the whole human story
- ③ it is entirely false and has no value as a description of historical patterns
- ④ it is difficult to understand without a detailed knowledge of ancient Roman and British history
- ⑤ it confirms that the prehistoric era provides the best examples of recurring cycles in human behavior

9. 다음 글의 주제로 가장 적절한 것은? 9) [13강 30번]

Stanford psychology professor Dr. Carol Dweck is the internationally recognized pioneer of the concept of "growth mindset" as a way to continually grow, learn, and persevere in our efforts. Dweck found that kids who are told they're "smart" actually underperform in future tasks, by choosing easier tasks to avoid evidence that they are not smart, which Dweck calls having a "fixed mindset." In contrast, Dweck found, kids who are praised not for their smarts but for their effort develop what Dweck calls a "growth mindset." They learn that their effort is what led to their success, and if they continue to try, over time they'll improve and achieve more things. These kids end up taking on tougher things, and feel better about themselves. "Emphasizing effort gives a child a variable that they can control," Dweck has explained.

- ① fostering student growth through a focus on effort rather than intelligence
- ② the positive correlation between being labeled "smart" and future performance
- ③ the impact of parental expectations on a child's emotional stability
- ④ the psychological mechanisms children use to avoid difficult tasks
- ⑤ how to design objective assessment tools for student evaluation

10. 다음 글의 제목으로 가장 적절한 것은? 10) [13강 31번]

The desert tortoise has a simple solution for coping with Death Valley's extreme heat: It avoids it. The slow-moving creature hibernates during the winter and stays in its tunnel for much of the summer, meaning that it spends more than 90 percent of its life immobile. In fact, the tortoise usually only surfaces after a good rain. Then, it gets to work. The tortoise stocks up on water by eating plants and digging holes to collect rain. But to stay supplied with water through its extended hibernation, the reptile relies on something else — its highly sophisticated bladder. Unlike most animals, the tortoise's bladder acts as a holding tank, allowing it to reabsorb water back into its body. Incredibly, a desert tortoise can go a full year without taking in any freshwater at all. And because its bladder is so important to a tortoise's survival, park rangers often remind visitors not to stop and help the slow-movers across the road. Tortoises become so terrified when people pick them up that they empty their bladders, losing their precious water reserves.

- ① The Migration Patterns of Desert Tortoises
- ② Common Reptile Behaviors in Harsh Environments
- ③ Thermo regulatory Strategies of the Desert Tortoise in Arid Habitats
- ④ Behavioral Patterns of the Desert Tortoise During Seasonal Changes
- ⑤ The Hidden Biological Mechanism Behind the Desert Tortoise's Yearlong Water Conservation

11. 다음 글의 흐름으로 보아, 주어진 문장이 들어가기에 가장 적절한 곳은? ¹¹⁾ [13강 32번]

This is the force called friction, which tends to slow down moving things by acting in the direction opposite to movement, that is backwards.

Imagine you are pedalling your bicycle on a level road. You stop pedalling: no force is now acting to move you forward. What happens? You gradually slow down. How could you slow down more suddenly, in a shorter distance? By putting the brakes on. (A) Because the brakes change your movement, making you slow down more suddenly, they must be exerting a force on the bicycle and you, as they grip and rub on the wheel-rims. (B) Even without the brakes on, there are other friction forces acting on you and your bicycle, which also slow you down. (C) One of these is friction in the wheels rubbing on the axles. (D) Another is air resistance, which you can feel, pushing you backwards as you and the bicycle move forwards. (E) When you apply these ideas to something around you, like a cart, you can see what could be generating friction: mainly the axles rubbing on the body as they rotate.

- ① (A) ② (B) ③ (C) ④ (D) ⑤ (E)

12. 다음 빈칸에 들어갈 말로 가장 적절한 것은? ¹²⁾ [12강 02번]

Why do we have the illusion that cramming for an exam is the best learning strategy? Because we are unable to differentiate between the various sections of our memory. Immediately after reading our textbook or our class notes, information is fully present in our mind. It sits in our conscious working memory, in an active form. We feel as if we know it, because it is present in our short-term storage space ... but this short-term section has nothing to do with the long-term memory that we will need in order to recall the same information a few days later. After a few seconds or minutes, working memory already starts disappearing, and after a few days, the effect becomes enormous: unless you retest your knowledge, memory vanishes. To get information into long-term memory, _____, rather than spend all your time studying.

*cram: 벼락 공부를 하다

- ① it is helpful to study in advance
- ② it is important to arrange your study plan
- ③ it is essential to study the material, then test yourself
- ④ it is difficult to study with old friends in the same place
- ⑤ it is useless to study without background knowledge of every subject

13. 다음 글의 괄호 (A), (B), (C) 안에서 문맥에 맞는 낱말로 가장 적절한 것은? ¹³⁾ [12강 08번]

The Barnum Effect is the phenomenon where someone reads or hears something very (A) [general / [personal/ but believes that it applies to them. These statements appear to be very personal on the surface but in fact, they are true for many. Human psychology allows us to want to believe things that we can identify with on a personal level and even seek information where it doesn't necessarily exist, filling in the blanks with our (B) [imagination / truth] for the rest. This is the principle that horoscopes rely on, offering data that appears to be personal but probably makes sense to (C) [countless / minor] people. Since the people reading them want to believe the information so badly, they will search for meaning in their lives that make it true.

- | (A) | (B) | (C) |
|------------|-------------|-----------|
| ① personal | imagination | countless |
| ② personal | truth | minor |
| ③ general | imagination | minor |
| ④ general | truth | countless |
| ⑤ general | imagination | countless |

14. 다음 글의 밑줄 친 부분 중, 문맥상 낱말의 쓰임이 적절하지 않은 것은? ¹⁴⁾ [12강 13번]

Health and the spread of disease are very closely linked to how we live and how our cities operate. The good news is that cities are incredibly @resilient. Many cities have experienced epidemics in the past and have not only @survived, but advanced. The nineteenth and early-twentieth centuries saw destructive @outbreaks of cholera, typhoid, and influenza in European cities. Doctors such as Jon Snow, from England, and Rudolf Virchow, of Germany, saw the connection between poor living conditions, overcrowding, sanitation, and disease. A recognition of this connection led to the replanning and rebuilding of cities to stop the @spread of epidemics. In the mid-nineteenth century, London's pioneering sewer system, which still serves it today, was built as a result of understanding the importance of clean water in @facilitating the spread of cholera.

- ① a ② b ③ c ④ d ⑤ e

15. 다음 글의 내용과 일치하는 것은? 15) [11강 41번]

The best way in which innovation changes our lives is by enabling people to work for each other. The main theme of human history is that we become constantly more specialized in what we produce, and constantly more diversified in what we consume: we move away from unstable self-sufficiency to safer mutual interdependence. By concentrating on serving other people's needs for forty hours a week - which we call a job - you can spend the other seventy-two hours (not counting fifty-six hours in bed) relying on the services provided to you by other people. Innovation has made it possible to work for a fraction of a second in order to be able to afford to turn on an electric lamp for an hour, providing the quantity of light that would have required a whole day's work if you had to make it yourself by collecting and refining sesame oil or lamb fat to burn in a simple lamp, as much of humanity did in the not so distant past.

- ① The best way for innovation to change our lives is for people to take responsibility for our work and take care of it on our own.
- ② The main theme of human history is simplification rather than consistently becoming more specialized in what we produce.
- ③ We move from unstable interdependence to more stable self-sufficiency because what we consume is consistently more diversified.
- ④ Innovation refers to the entire process of developing and practicalizing new ideas regardless of whether the source of ideas is good or bad.
- ⑤ By focusing on meeting the needs of others for a shorter period of time, you can enjoy the services they offer for much longer.

16. 다음 글의 제목으로 가장 적절한 것은? 16) [11강 43번]

The famous primatologist Frans de Waal, of Emory University, says humans downplay similarities between us and other animals as a way of maintaining our spot at the top of our imaginary ladder. Scientists, de Waal points out, can be some of the worst offenders - employing technical language to distance the other animals from us. They call "kissing" in chimps 'mouth-to-mouth contact'; they call "friends" between primates "favorite affiliation partners"; they interpret evidence showing that crows and chimps can make tools as being somehow qualitatively different from the kind of toolmaking said to define humanity. If an animal can beat us at a cognitive task - like how certain bird species can remember the precise locations of thousands of seeds - they write it off as instinct, not intelligence. This and so many more tricks of language are what de Waal has termed "linguistic castration." The way we use our tongues to disempower animals, the way we invent words to maintain our spot at the top.

- ① Challenging Animal-Centric Language
- ② Linguistic Strategies to Look Down on Animals
- ③ Establishing a Closer Relationship with Animals
- ④ Humanity: A Natural Disaster for the Mother Nature
- ⑤ Frans de Waal, the Greatest Primatologist of All Time

17. 다음 글의 요지로 가장 적절한 것은? ¹⁷⁾ [11강 48번]

When reading another scientist's findings, think critically about the experiment. Particularly, you should ask if the scientist or group conducting the experiment was unbiased. Being unbiased means that you have no special interest in the outcome of the experiment. For example, if a drug company pays for an experiment to test how well one of its new products works, there is a special interest involved: The drug company profits if the experiment shows that its product is effective. Therefore, the experimenters aren't objective. They might ensure the conclusion is positive and benefits the drug company. When assessing results, think about any biases that may be present!

- ① A positive attitude is required when reading the findings of an experiment.
- ② When evaluating the outcome of an experiment, check if any biases are related or not.
- ③ It is natural that experimenters try to get desired results if they are paid by the company.
- ④ Practicality is a critical factor when assessing a scientist's findings.
- ⑤ An experiment should be conducted to test how well new products work before launching them.

18. 다음 글에서 전체 흐름과 어색한 문장인 것은? ¹⁸⁾ [11강 52번]

Interestingly, in nature, the more powerful species have a narrower field of vision. ㉠ The distinction between predator and prey offers a clarifying example of this. ㉢ The key feature that distinguishes predator species from prey species isn't the presence of claws or any other feature related to biological weaponry. The key feature is the position of their eyes. ㉡ Predators evolved with eyes facing forward — which allows for binocular vision that offers accurate depth perception when pursuing prey. ㉣ Prey, on the other hand, often have eyes facing outward, maximizing peripheral vision, which allows the hunted to detect danger that may be approaching from any angle. Consistent with our place at the top of the food chain, humans have eyes that face forward. ㉤ We have the ability to gauge depth and pursue our goals, but we can also track important action on our periphery.

- ① ㉠ ② ㉢ ③ ㉡ ④ ㉣ ⑤ ㉤

19. 다음 글의 제목으로 가장 적절한 것은? ¹⁹⁾
 [11강 54번]

People engage in typical patterns of interaction based on the relationship between their roles and the roles of others. Employers are expected to interact with employees in a certain way, as are doctors with patients. In each case, actions are restricted by the role responsibilities and obligations associated with individuals' positions within society. For instance, parents and children are linked by certain rights, privileges, and obligations. Parents are responsible for providing their children with the basic necessities of life—food, clothing, shelter, and so forth. These expectations are so powerful that not meeting them may make the parents vulnerable to charges of negligence or abuse. Children, in turn, are expected to do as their parents say. Thus, interactions within a relationship are functions not only of the individual personalities of the people involved but also of the role requirements associated with the statuses they have.

- ① What Are the Basic Necessities of Life?
- ② Influence of Role Expectations on Interpersonal Relationships
- ③ Between Doctors and Patients: The Changing Balance of Power
- ④ Parent-Child Relationship: Why Is It Important And How to Build It
- ⑤ How the Power of Expectations Can Help You to Overcome Struggles

20. 다음 글을 읽고, 보기 안의 빈칸 (A), (B)에 들어갈 말로 가장 적절한 것은? ²⁰⁾ [11강 57번]

Back in 1996, an American airline was faced with an interesting problem. At a time when most other airlines were losing money or going under, over 100 cities were begging the company to service their locations. However, that's not the interesting part. What's interesting is that the company turned down over 95 percent of those offers and began serving only four new locations. It turned down tremendous growth because company leadership had set an upper limit for growth. Sure, it executives wanted to grow each year, but they didn't want to grow too much. Unlike other famous companies, they wanted to set their own pace, one that could be sustained in the long term. By doing this, they established a safety margin for growth that helped them continue to thrive at a time when the other airlines were flailing.

〈보기〉
